

Zero Errors The Super Smart Assistant

Remove payroll errors from your payroll process to increase accuracy, satisfaction and remove risk of overpayment upset and rework.

Errors cost time and money!

Payroll errors are painful for the employee, the manager, and the payroll office. They cause lost time of employees, managers and payroll to make the corrections. Costly if they are overpayments not detected or can't be recovered!

Errors can occur in numerous places, from incorrect forms, hard to read writing, keying errors, misinterpretation, incorrect use of systems, etc. They can be the fault of employees, managers, third parties and the payroll office.

There is no way of eliminating errors 100% so the ability to have effective quality control at the end of the payroll cycle is essential. All errors surface in the payroll input/output reports. It is up to the ability of payroll staff to sift through reports that can be over hundreds of pages to spot the errors, or things that don't look right.

There is a mountain of data to check and the time allocated for checking is usually at the most time constrained and stressful part of the payroll cycle, and how do you remember all the regular exceptions. There simply is not the time to effectively clarify all irregularities! How can payroll staff be truly effective with so much to check and so little time!!

Intelligent System

An intelligent payroll system that finds errors for you. One that will analyse the payroll data from the past, then specifically compares all variations from the last payroll to the current payroll about to be produced.

For every variation (changes in payment, deduction or costing) Affinity evaluates all the data to find out what caused this variation to occur. Was it a change to an employee record, a manual timesheet, an adjustment for a prior period, etc.

Once the reason for the variation is identified it then looks at prior payrolls to see if it is a regular variation or an exceptional one. Based on this evaluation it sorts all the variations based on likelihood that there may be something wrong or simply a regular variation. The most suspicious variations are placed at the top of the list with a clear English description of cause.

This list is presented in real-time on the screen showing all the variations as to who, where, how much and why, sorted in order of priority. The manager reviews, confirms an error, makes a change or two and at a press of a button the system updates the analysis almost instantly.

Error free payrolls are now possible with Affinity Zero. Take the effort and stress out of finding errors, produce error free payrolls and avoid re-work post payroll by employing Affinity Zero today.

“Remove payroll errors – for good!”

Key Features

- **Remove Errors**
Increase accuracy to reduce errors, rework and upset.
- **Accuracy**
Increased accuracy provides the business with 'Perfect Information' in which to manage and monitor people and their costs.
- **Reduced Workload**
The system highlights potential errors for you to review and stop the rework, upset and reconciliations required to resolve errors.
- **Service Quality**
Increase service delivery quality to your people by providing error free payrolls.

 **AFFINITY**
Clever HR Execution Systems
